<https://www.linkedin.com/in/shangwayhsu>

EDUCATION

University of California, San Diego
B.S. Computer Science, Minor - Cognitive Science

Expected Graduation: 2018
Cumulative GPA: 3.67 - Major GPA: 3.86

Related Coursework:

CSE 100: Advanced Data Structures and Object-Oriented Design
CSE 30: Computer Organization and Systems Programming
CSE 105: Theory of Computability

CSE 20: Discrete Mathematics
CSE 21: Mathematics for Algorithms and Systems
CSE 101: Design and Analysis of Algorithms

SKILLS

Proficient in: Python, Java, C++, REST, Swift/Objective-C, iOS/Xcode, Unix, Git

Experience in: C, HTML, CSS, JavaScript, SQL, Networking

EXPERIENCE

SSL – Space Systems Loral
Software Engineer Intern

Palo Alto, CA
Jun 2016 – Sept 2016

- Developed an internal RESTful Web Server using various Python frameworks such as Flask and Tornado with the goal of distributing data to other programmers in a standardized manner.
- Implemented REST styled realtime data streaming with WebSockets on both server and client sides.
- Created front-end web interfaces using Javascript/CSS/HTML to generate queries and plot historical and streaming data.
- Gained thorough understanding of networking through the development of RESTful APIs and socket connections.

SLAC (Stanford Linear Accelerator Center) National Accelerator Laboratory
XFEL Software Intern

Menlo Park, CA
Jun 2015 – Aug 2015

- Implemented an optimization algorithm in C++ called Particle Swarm to find an optimal configuration for SLAC's LCLS (particle accelerator) in order to form a coherent electron beam.
- Used the Python MATLAB library for data visualization of the optimization results from the accelerator simulation.
- Made improvements to the algorithm responsible for the electron beam bandwidth calculation.

PROJECTS

Personal Website – <https://shangwayhsu.github.io>

Continuous

- Implemented personal website to showcase projects through the use of Bootstrap/HTML/CSS/JavaScript.
- Single-page website with scrolling animations and dynamic background.
- Responsive page with mobile support such as collapsible navigation bar to fit devices with smaller screen sizes.
- Email Contact form powered by Formspree.io.

Instagram Replica App – iOS App Development

May 2016

- Developed using Parse as a backend cloud database in order to create custom data entries such as user logins/passwords, followers, posts, etc. Deployed using Heroku cloud platform.
- Extensive transfer of user data between application and the Parse server using Swift.
- Obtained a comprehensive grasp on application development in iOS/Swift/xCode.

To-do List App – iOS App Development

Feb 2016

- Implemented To-do list in Swift and Xcode for iPhone as an entry point to iOS development.
- Extensive use of StoryBoard in Xcode for UI elements and navigation control. Including multiple views.
- Functionality includes adding new items with title and a short description, and deleting/editing existing fields.

Autocomplete – C++

Jan 2016

- Used Multiway Trie to implement a dictionary capable of Autocomplete.
- Use of Priority Queue to store relations between nodes to decrease autocomplete time at the cost of space.
- Multiway Trie guarantees $O(L)$ in `find()` and `autocomplete()`, where L is length of the longest word.

Unix Argument Parser – Java

Apr 2015

- Implemented a general command-line argument parser library following the Unix single-character option conventions and also the GNU long-form option conventions by using Object Oriented Design.
- Created using data structures such as Hashmaps and Sets for maintaining an organized OOP structure.
- Uses the fluent-interface style described in <https://www.martinfowler.com/bliki/FluentInterface.html>.

Replica of 2048 Puzzle – Java

Mar 2015

- Backend created using Java using matrices to represent the tiles of the game.
- GUI created using JAVAFX 8 and supports window resizing.
- Additional functionality includes: saving game states, loading games from text file, and multiple game grid sizes.
